Post some sample Problem Statements for managing course registrations.

You should not be able to see sections that you are unable to register in due to program restrictions.

Better support for different screen sizes.

Students should be able to distinguish in the schedule wether the block is a lab, lecture or tutorial.

I want to be able to quickly select a full course schedule

Course searching and calendar building are pretty awful in their current state

should say what the prereqs are when you're signing up for courses

Something that encompasses the pre requisites for each class

Update schedule/timetable preview

Multiple windows clutters up the screen.

Post some sample Problem Statements for managing course registrations.

You shouldn't have to navigate through several different pages to see a visual representation of your schedule.

Collapse the uvic logo at the top - takes up too much space

You shouldn't be able to register for a lab without being registered in the course

You should be able to quickly see your wait-list position for every class you are wait-listed in

CRNs are magic numbers to the user.

Show pre requisites when registering for courses

Course registration requires at least two windows to actually complete

I want to see all the info about a course at one glance, instead of needing to click into specific sections

When on wait list for lecture, can't register to be on waitlist for lab

33

Post some sample Problem Statements for managing course registrations.

System should automatically check to make sure courses that are commonly taken at same time as others don't overlap.

Stop people from registering for labs unless they are in the class

There should be an option for automated waitlist acceptance

Students should not be able to register in multiple courses in the same time block

Students should know if a section is reserved for a specific faculty (ie Seng or CSC specific sections)

Show where you are on the waitlist for your courses.

I want to be able to drop a course without using a drop-down menu

CSC vs Software eng sections aren't indicated. Need to just guess and check to register to the appropriate section

Students should have the ability to manage view sizes (e.g. maximize schedule, tabs for course details)

33

Post some sample Problem Statements for managing course registrations.

should block students from signing up to courses they do not have the prerequisites for

Students should be able to immediately see if the courses they are registering for conflict with any other classes they're taking before submitting all the CRN's

Suggest courses based on completed classes and degree

Design a minimal course selection page

There's no guidance on how to register.

On the class registration page, you can't see the full calendar without covering the find classes search area

Post some sample Solution statements

create a flag that checks for course pre and co requisites and alerts the user if they do not have the required co/prerequisite courses for a course when add the course to a schedule

Make tutorial or walk though process for first time users to help them register (eg, video)

grey out the courses that student doesn't have prereqs for and list prereqs somewhere with the course

Restrict users from registering for a lab until they are registered in the course

Create a button to drop a course which, when clicked, displays a pop-up which asks the user if they're sure they want to drop the course. They can either say yes or no. When they say yes, the course is dropped.

Given a user is in a degree program, when a user searches for a course code, disable any course sections that they are unable to register in and display a message indicating the required degree to enroll.

Create a mechanism that verifies a user can register for a class or specific section for a class and hide/blur out sections that the student can't register to.

Create tutorials for first time users of the platform to help with registration. Eg Video

When the student goes to the course registration, the website will suggest courses that the student is able to take based on their prerequisites, and degree.

Post some sample Solution statements

Create a tutorial for first time user for registration

A pop-up should appear when a student does not have the required prerequisite that offers to redirect the student to register for the prerequisite instead.

Show errors involving conflicts when a user selects a course for registration.

To fix not knowing if you can register for a course or not until you try; grey out/disable the option to register if you are unable to + add a message as to why you cannot register for said course.

Allow user to minimize the schedule to a tab to reduce visual clutter. Have a red icon show when classes overlap.

Since we signed in to register the system should have access to the courses we have previously taken. Also if you click more info on the course it says it's prerequisites. Therefore, use these tools to automatically check if you have prerequisites.

Check for student's program prior to adding a course that has program enrolment restrictions

If no prerequisites when trying to join class a warning comes up telling what class is preventing the user from adding the class.

hi

Post some sample Solution statements

As a UVic student, I want the required courses I have to take for the remainder of my program to be displayed with a drag-and-drop interface next to my calendar, so I have an easier time planning/building my calendar for an upcoming term.
